

■ AI & Future Careers

What Jobs Will Exist in 2035?

A guide for young learners exploring the future of work

■ Lesson Objectives

- Understand what Artificial Intelligence (AI) is and how it works
- Discover how AI is changing our world and workplaces
- Explore new jobs that AI will create by 2035
- Identify jobs that will always need human skills
- Learn the key skills needed to succeed in a future with AI
- Understand how AI can solve big global problems

■ Section 1: What is Artificial Intelligence?

Artificial Intelligence (AI) is when computers and robots are programmed to think, learn, and make decisions — just like humans! AI can recognise your voice, understand images, play games, and even help with homework.

The amazing thing about AI is that it **learns from experience**. Just like you get better at football the more you practise, AI gets smarter the more data it processes.

■ AI You Already Use Every Day

■ Voice Assistants

Alexa and Siri understand your speech and give intelligent answers — that is AI!

■ Smart Game Characters

Video game opponents that adapt and get harder as you improve are powered by AI.

■ Music & Video Apps

Apps that suggest songs or videos you might enjoy are using AI to learn your tastes.

■ **Fun Fact:** AI learns by practising millions of times — just like how you get better at games the more you play. And unlike humans, AI never gets tired of learning!

■ Section 2: How AI is Changing Our World

By 2035, AI will help us do many jobs **faster, safer, and smarter**. AI robots are already helping doctors in hospitals, making our homes smarter, and helping teachers in classrooms. Imagine a world where intelligent helpers are everywhere, making life easier and more fun for everyone!

Where AI is Helping	What It Does Today	What It Will Do by 2035
Hospitals	Assists doctors with scans and diagnoses	Performs routine operations and drug
Schools	Personalises learning for each student	Creates fully custom AI tutors for ever
Homes	Smart speakers, thermostats, security	Fully automated home management s
Transport	GPS navigation, auto-braking in cars	Fully self-driving taxis, delivery drones
Environment	Monitors weather and pollution levels	Predicts and helps prevent natural dis

Section 3: Jobs That Will Always Need Humans

While AI is very powerful, there are many things it **cannot do as well as humans**. Jobs that require empathy, creativity, ethical judgment, and genuine human connection will always need real people. Here are some careers that will always belong to humans:

■ Artists & Designers

Creating art, music, and design that expresses human emotion and imagination — things AI can only imitate.

■■■ Teachers & Coaches

Inspiring students, understanding individual feelings, and helping people grow emotionally and intellectually.

■ Healthcare Workers

Caring for patients with kindness and compassion — a nurse's comforting presence cannot be replaced.

■ Scientists & Researchers

Asking bold new questions, forming creative hypotheses, and making sense of discovery.

■■ Lawyers & Judges

Making complex ethical and moral decisions that require human judgment and fairness.

■ Counsellors & Therapists

Providing emotional support, understanding trauma, and guiding people through life challenges.

Section 4: Exciting New Jobs Created by AI

Here is something amazing: while AI may change some existing jobs, it will also **create brand new careers** that do not exist yet! Many of the most exciting jobs in 2035 are being invented right now. Here are some you might have:

Job Title	What They Do	Skills Needed
AI Trainer	Teaches AI systems how to learn better and understand human actions, data	Education, communication, data
Robot Counsellor	Helps robots understand human emotions so they can interact naturally with	Psychology, programming, with
Virtual World Designer	Creates amazing environments for Virtual Reality (VR), 3D modelling, and	Art, design, 3D modelling, and
Data Detective	Analyses huge amounts of data to find useful patterns and solve problems	Maths, logic, problem-solving, and
Space Architect	Designs habitats and structures for life on the Moon, Mars, and beyond	Engineering, science, creativity
AI Ethics Officer	Makes sure AI systems are fair, safe, and used responsibly for everyone	Philosophy, law, technology
Drone Traffic Controller	Manages fleets of delivery drones flying through busy airspace safely	Aviation, airspace, safety, decision-
Bioinformatics Scientist	Uses AI to analyse DNA and find cures for genetic diseases	Biology, genetics, maths

■ Section 5: Skills You Need for Future Jobs

The good news is that you can **start building future-ready skills right now!** No matter what job you end up doing in 2035, these core skills will always be valuable. Here is what experts say will matter most:

■ Creativity

Use your imagination to think of new ideas and solutions that AI simply cannot dream up. Creative thinking will be the most valuable human skill.

■ Problem-Solving

Learn to think critically and solve tricky problems step by step. AI can compute, but humans can reason about what truly matters.

■ Teamwork

Work well with others, share ideas, and build on each other's strengths. Collaboration is something AI will never fully master.

■ Tech & Coding Skills

Learn how computers and AI work. Try coding games and apps. Even basic programming knowledge gives you a huge advantage.

■ Communication

Express your ideas clearly in writing and speaking. Humans who can explain things well will always be in demand.

■ Adaptability

The world will keep changing. Being able to learn new skills quickly and embrace change is essential for the future.

■ **Key insight:** AI is great at **computing** — but humans are great at **caring, creating, and connecting**. These uniquely human strengths will always be in demand!

■ Section 6: How AI Helps Humans Work Better

The best vision for the future is not AI *replacing* humans — it is AI **working alongside humans** to achieve things neither could do alone. Think of AI as a very powerful tool, like a calculator — it makes you better at your job!

	Without AI	With AI
Speed	Slow, manual, repetitive tasks	Instant processing, faster results
Accuracy	Human errors are common	AI catches mistakes and improves precision
Creativity	Limited time for new ideas	AI handles routine work, freeing creativity
Discovery	Takes years of research	AI can spot patterns in millions of datasets
Access	Expertise limited to rich areas	AI brings expert knowledge to everyone

■ Section 7: Timeline — From Today to 2035

The future is arriving faster than you think! Here is a timeline of how AI and careers will evolve over the next decade:

■ 2024–2025

AI assistants become standard in homes and classrooms. Tools like ChatGPT help with writing and research daily.

■ 2027–2028

AI-powered robots begin working alongside humans in hospitals, schools, and factories to handle routine tasks.

■ 2030

Self-driving vehicles become common. AI doctors can diagnose many diseases as accurately as human specialists.

■ 2032–2033

Many new AI-focused careers emerge. Universities launch degrees in AI Ethics, Robotics, and Virtual World Design.

■ 2035

Exciting new career fields that we cannot fully imagine today will exist! Students starting school now will pioneer them.

■ Section 8: How AI Can Solve Big Global Problems

One of the most exciting things about AI is its potential to help solve the world's biggest and most important challenges. Here are some areas where AI is already making a huge difference:

■ Protecting Our Planet

AI monitors forests, tracks pollution in real time, and helps protect endangered animals from poachers.

■ Finding New Cures

AI helps doctors discover new medicines and disease treatments far faster than traditional research methods.

■ Safer Transport

AI makes cars, trains, and aircraft smarter — helping prevent accidents and saving thousands of lives.

■ Fighting Hunger

AI analyses soil, weather, and crop data to help farmers grow more food with less water and fewer chemicals.

■ Clean Energy

AI optimises power grids and predicts renewable energy output, making solar and wind power more efficient.

■ Education for All

AI tutors can give personalised, high-quality education to children in remote or under-resourced areas.

■ Section 9: How to Prepare for Your Future!

The future belongs to those who prepare for it today. You do not need to wait until you are grown up — you can start building your future right now!

■ Keep Learning

Never stop exploring new subjects and ideas. Read books, watch documentaries, and always ask questions. Curiosity is your greatest superpower!

■ Practice Tech Skills

Try coding games and apps like Scratch, Code.org, or Minecraft Education. Learn how computers work — it is much more fun than you think!

■ Be Creative

Ask "what if" questions every day. Imagine new inventions. Draw, write, build — creativity is one skill AI will never match.

■ Work with Others

Join teams, collaborate on projects, and learn from people who think differently. Great futures are built together.

■ Stay Curious

The jobs of 2035 will need people who love learning. Treat school as your training ground for an incredible future career.

■ Section 10: Key Vocabulary

Term	Definition
Artificial Intelligence (AI)	Computer systems that can think, learn, and make decisions like humans.
Machine Learning	How AI learns from data and gets smarter over time through experience.
Robot	A machine that can be programmed to carry out tasks automatically, often using AI.
Virtual Reality (VR)	A completely computer-generated world that you can experience with a headset.

Augmented Reality (AR)	A technology that overlays digital information onto the real world around you.
Automation	Using machines or AI to complete tasks that humans used to do manually.
Algorithm	A step-by-step set of rules or instructions that tells a computer how to solve a problem.
Data	Information collected and stored by computers — the "food" that AI learns from.
Coding / Programming	Writing instructions in a computer language to tell a computer what to do.
AI Ethics	The study of making sure AI is used fairly, safely, and responsibly for all people.

■ Section 11: Amazing AI Facts!

Did you know AI is doing some truly mind-blowing things already? Here are some incredible facts that show just how powerful AI has become:

■ Chess Champion

AI can beat the world's best chess players every single time. The AI "AlphaZero" learned to play chess from scratch in just 4 hours!

■ Creating Art

AI can now generate paintings, write stories, and compose music — but it still needs human artists to guide what "good" means.

■ Face Recognition

AI can recognise your face in a photo in milliseconds — faster than any human eye could ever manage!

■ Medical Breakthroughs

Google's DeepMind AI cracked a 50-year-old biology puzzle — predicting the shape of proteins — in just 2 years!

■ Translation Superpower

AI can now translate between over 100 languages in real time, helping people from every country communicate.

■ Self-Driving Cars

AI-powered cars from companies like Waymo have already driven millions of km safely without a human driver!

■ Section 12: What Job Might YOU Have in 2035?

Here is the most exciting thought of all: **some of the best jobs in 2035 have not even been invented yet!** They will be created by creative, curious thinkers — people just like you. Think about what you love doing right now, and imagine how AI could help you turn it into an amazing career.

■ Love animals?

Become a **Robotic Pet Designer** — creating AI companions for people who are lonely or need support.

■ Love music?

Become an **AI Music Creator** — composing personalised music using AI for films, games, and therapy.

■ Love nature?

Become a **Space Garden Planner** — designing food-growing systems for life on the Moon or Mars.

■ Love science?

Become a **Brain-Computer Interface Engineer** — helping people control technology with their thoughts.

■ Love games?

Become an **Immersive Experience Architect** — building virtual worlds that feel completely real.

■ Summary: What We Learned Today

■ AI is Already Here

AI is not just science fiction — it is already part of your daily life and will continue to grow rapidly.

■ New Jobs are Coming

Many exciting careers that do not exist yet will be created by AI by 2035 — and you could pioneer them!

■■■ Humans Are Irreplaceable

Jobs requiring creativity, empathy, and ethical judgment will always need real human beings.

■ You Can Prepare Now

Creativity, coding, teamwork, and curiosity are the skills that will make you future-ready.

■ AI Can Help Our World

AI has the potential to solve climate change, disease, and inequality — if we use it responsibly.

"The best way to predict the future is to create it!"

■ Thank You for Exploring the Future with Us! • Keep Learning, Keep Dreaming, Keep Building!
